

Dear parents/carers,

This half term in Year 6 we will be studying the Industrial revolution and focussing on the changes that took place in Britain during this time.

For their CID project, I would like Year 6 to design a new invention that would have been useful during the industrial revolution. This may be based on improving an existing machine or something which is completely new.

For example: a new way of generating steam power or a better contraption for farmers.

Your design must include:

- A labelled diagram
- A rationale explaining why it would be useful
- An explanation of how your machine/invention works
